📊 Bright Coffee Shop Sales Analysis

Project Description

---

1. Introduction

This project focuses on analyzing coffee shop sales data to uncover meaningful insights that can support business decision-making. The analysis explores sales performance, customer purchasing patterns, product trends, and peak sales periods.

The objective is to transform raw transactional data into actionable insights using data analytics tools and techniques.

---

2. Objectives

The main objectives of this project are:

- To analyze total revenue and overall sales performance
- To identify best-selling products and product categories
- To determine peak time intervals for sales
- To evaluate product and store performance
- To provide data-driven recommendations for business improvement

---

3. Dataset Description

The dataset contains transactional sales data from a coffee shop. Each record represents a transaction and includes the following key fields:

- Transaction ID
- Transaction Date and Time
- Store Location
- Product Category
- Product Type and Details
- Quantity Sold

- Unit Price

This dataset allows for detailed analysis of sales trends across different dimensions.

---

4. Methodology

The project followed a structured data analytics process:

4.1 Data Cleaning

- Removed empty rows and unnecessary values
- Ensured correct data formatting in Excel
- Created calculated fields (e.g., total revenue)

4.2 Data Analysis (SQL)

- Used SQL queries to explore and analyze the dataset
- Calculated total revenue and total units sold
- Identified top-performing products and categories
- Analyzed sales trends by date, time, and location

4.3 Data Visualization (Excel)

- Created pivot tables to summarize data
- Built charts to visualize trends and patterns
- Analyzed:
    - Revenue by product type
    - Quantity sold by category
    - Peak sales hours
    - Best-selling products

4.4 Project Planning

- Designed workflow using Miro
- Created a Gantt chart using Canva to track project progress

---

5. Key Insights

The analysis revealed the following:

- Coffee products generate the highest revenue
- Sales peak during specific hours of the day
- Certain product categories outperform others significantly
- Some products have lower demand and may require improvement
- Sales performance varies across store locations

---

6. Recommendations

Based on the findings, the following recommendations are proposed:

- Focus marketing efforts on high-performing products
- Increase staffing during peak sales hours
- Introduce promotions during low-sales periods
- Review and improve underperforming products
- Use data regularly to support business decisions

---

7. Conclusion

This project demonstrates how data analytics can be used to understand business performance and uncover valuable insights. By leveraging tools such as SQL and Excel, raw data was transformed into meaningful information that can guide strategic decisions.

Continuous analysis and monitoring can further improve performance and drive business growth.
